

Villa Borghese, 3, 3, 29680 Estepona, Malaga, Spain

Dear colleagues!

My name is Alexander Kobtsev, and I am the owner of the company Libre Evolucion de Energia S.L. (Spain).

My company deals with industrial introduction of innovative technologies in the field of alternative energy, photosynthesis, oil and gas industry equipment, as well as PGNA detection systems.

We have developed the FREENERGY facade system, produced a prototype, tested it according to EU standards and patented the technology.

FREENERGY is an autonomous energy system, converting solar energy into electrical energy, storing it and making it possible to be used by a man to improve the quality of life.

At the moment the the price for FREENERGY facade system is about 500 Euro. As exemplified by Spain, we can say with certainty, that the cost of energy system will fully compensate customer's expenses within 10 years.

Today the share of renewable energy sources in total final energy consumption rate in the world is around 23%, and is projected to increase to 32% by 2030. Investments in renewable energy sources projects globally have amounted to approximately \$330 billion, and by year 2030, according to analysts, they will reach \$400 billion.

According to forecasts of experts, by 2024 the world market of window and facade systems will reach \$340 billion. (source - Grand View Research).

FREENERGY is an innovative technology for production of energy-generating facade systems of the future and a unique opportunity to form a new market and control it.

We are looking for strategic partners and investors for joint organization of serial production of FREENERGY facade system and introduction of new products to the world market.

Project Presentation and Proposal for the Investor are attached to this letter.

I propose to discuss your interest.
